

Task 2 - Data Visualization and Storytelling

Objective

The objective of this task is to create meaningful visualizations and derive business insights from sales data using Power BI.

Tool Used

- Microsoft Power BI Desktop
-

Dataset Used

- Superstore Sales Dataset
 - File: `Superstore_Cleaned.xlsx`
-

Dashboard Components

KPI Cards

- Total Sales
- Total Profit
- Total Orders
- Total Customers

Visualizations

1. Category Wise Sales Analysis (Bar Chart)
 2. Region Wise Sales Analysis (Donut Chart)
 3. Monthly Sales Trend Analysis (Line Chart)
 4. Profit by Sub-Category Analysis (Column Chart)
 5. Top 10 Customers Analysis (Bar Chart)
 6. Loss Making Products Analysis (Bar Chart)
-

Key Business Insights

- Technology category generated the highest sales.
 - West region generated the highest revenue.
 - Copiers produced the highest profit.
 - Tables category generated losses.
 - Sales peaked during November and December.
 - Top customers contributed significantly to overall revenue.
-

Dashboard Design Principles

- Clean and professional layout
 - Consistent color theme
 - Business-focused insights
 - Easy-to-read charts
 - Minimal clutter
 - Proper chart selection
-

Outcome

This project helped in understanding:

- Data Visualization
 - Dashboard Design
 - Business Intelligence Reporting
 - Data Storytelling
 - Power BI Dashboard Development
-

Conclusion

The dashboard successfully converts raw sales data into meaningful business insights. It provides a clear understanding of sales performance, profitability, customer contribution, and business trends through effective data visualization and storytelling techniques.
